This permit is issued subject to all prior rights on the source and supplementary to permit No. 2678 under which a water right was granted this applicant for the same land herein described. The quantity of water herein allowed is placed at One and six tenths (1.6) cubic feet per second so that the full amount may be diverted and used in the event that there is no water whatever available in the source described in permit No. 2678. However, the combined amount of water which may be diverted from the sources described in permits Nos. 2678 and 3667 must not exceed Three and two tenths (3.2) cubic feet per second or the statutory allowance for the maximum amount of land described under both filings. The applicant will be required at the time of filing proof of beneficial use of water to definitely segregate the areas of land which obtain water for irrigation purposes from each of the sources named in these permits, so that certificates can be issued for the land to which the water is appurtenant. A standard headgate and weir must be installed at or near the point of diversion to facilitate the measurement and control of water. The State reserves the right to regulate the use of the water herein granted at any and all times.
